DID YOU KNOW THAT DUST IS FOOD FOR BACTERIA?

"Dusting and dust mopping in a healthcare environment are critical components to the overall prevention of hospital infections. Since pathogens use 'dust and dirt' as a food source and mode of transportation, microbes must be removed from surfaces without causing them to become airborne. In our testing, we have found that Rubbermaid HYGEN™ Microfiber is the best platform for providing safe and effective cleaning on healthcare surfaces. In addition, proper dusting prior to damp mopping with Rubbermaid HYGEN™ Microfiber helps eliminate floor hazing."

CLEANING AND DISINFECTING IS NOT ENOUGH

"The guiding principle is always to remove germs if possible rather than kill them, and then when necessary, use the least amount of the mildest chemical that will do the job because stronger often means more toxic to people. Therefore, the best way to remove pathogens in spore or vegetative form is with the use of a high quality split microfiber cloth which can remove up to 99.9% of the organic soil. And with the soil go the microbes."
