SIMPLY what you need

SIMPLE

We want your experience with us to be pleasant and easy. If you do not find what you need quickly, contact us! We will be happy to share our manufacturing expertise with you...

it's that simple.

EFFICIENT AND DURABLE

We manufacture commercial and industrial mats made from quality materials. Our mats are designed to perform and resist your environment.

TAILOR MADE

You are our inspiration! Proof: almost half of our mats are custom made according to the shape, size and finish required by our customers.

Tell us your needs and let us adapt accordingly!

DYNAMIC

We have such a passion for matting that we constantly strive to communicate it through innovative solutions, outstanding service, employees, etc...

We are eager to please you.

Your satisfaction is our priority!

Safety and Cleanliness are important to you?

Here's how to achieve this with Mat-Tech's entrance matting solution:

Look for these logo's through the catalogue to identify the right mat for you.

- For outdoor/indoor entrance and vestibule
- Scrapes and traps dirt/salt and prevents it from entering the building

- For indoor entrance
- Removes debris from shoes and retains water to keep entrances clean

- For indoor areas
- Absorbs water to keep corridors dry and safe

DID YOU KNOW?

The proper use of entrance mats is recognized by the Green Building Council of Canada, under LEED® certification system (Leadership in Energy and Environmental Design), visioning a transformed built environment leading to a sustainable future. Some Mat Tech products can contribute in obtaining 2 credits:

- 1 Credit*: “Permanently use the entrance matting system to capture dirt, particles etc. from entering the building at all high volume entrances”
- 1 Credit**: Use material with recycled content in order that the sum [...] constitutes at least 7.5% of the total value of the material in the project.

For more information, visit the website: www.cagbc.org

**EQ Credit 5 requirements, Green Building Rating System v1.0*

***MR Credit 4.1 requirement, Green Building Rating System v1.0*

KEEP IT GREEN!

DISPOSAL CONCERNS

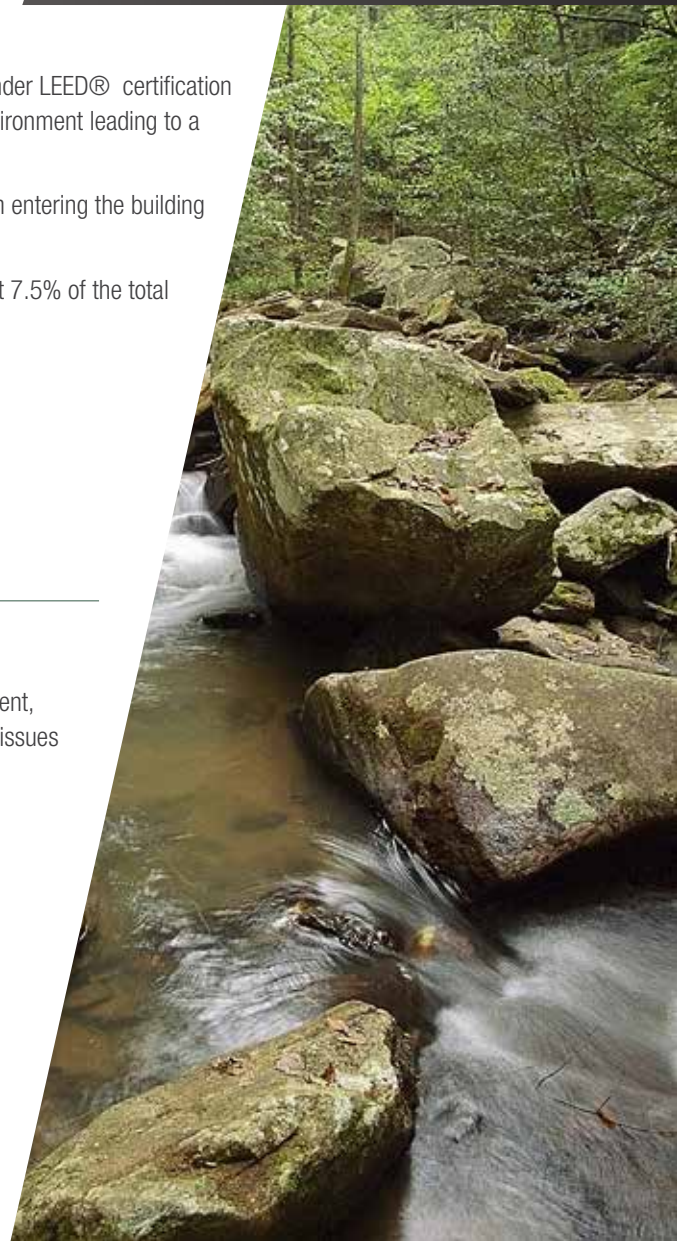

One of the most important parts of the Green Building Program is concern for the environment, including the use of products that can help reduce the need for landfills. There are two key issues with mats:

1. THE COMPOSITION OF THE MAT

Many of our products have recycled content that prevent post-consumer or post-industrial products from entering landfills, thus preserving our natural resources.

2. THE PERFORMANCE LIFE OF THE MAT

High-performance mats can have a performance life of many years. Our Performance, Prestige, Logo and Ergonomic Collections (see pg. 6, 24 & 32) have an extended Total Confidence Warranty that ensures a productive and effective life. To perform efficiently in a green building, sustainability is key. Inexpensive, low-performance mats will need to be replaced more frequently causing a disposal issue.

PRODUCTS	% Recycled Content	PRODUCTS	% Recycled Content
Chevron	50% surface	Safety-Step (Perforated)	Up to 47%

**TOTAL CONFIDENCE
WARRANTY**

*We truly believe in our product and stand behind it. You can therefore rest assured in giving us your **total confidence**.*

Your satisfaction is our priority!

Premium quality vinyl made from an environmentally friendly formula

- **No mess!** Backing 100% impermeable to ensure optimal protection for your floors
- **No quality problem!** Perfect fibre adherence for a longer life
- **More durable!** Backing and borders are resistant to a wide range of temperatures and weather
- **Cost effective!** Using only premium quality vinyl reduces the weight and therefore facilitates shipping and handling and reduces transport costs.

Extra-large Dimensions!

- The durability of the backing allows the permanent joining of two mats to create custom widths up to 11'9"
- The fact that our entrance mats are made in Canada affords us the to provide customized matting solutions to fit your specific needs.

**ADD
YOUR
LOGO**

- Create a great first impression by adding your logo into any identified entrance mat. Look for this logo throughout the catalogue.
- We can reproduce virtually any design you want. Simply let your imagination run free!
- See page 25 to see the complete collection

STANDING FOR LONG PERIODS CAUSES FATIGUE¹

Prolonged work in a standing, stationary position, slows the **circulation of blood** through the veins, making the heart **work harder**, which equates to a prolonged physical effort. This is the main cause of fatigue.

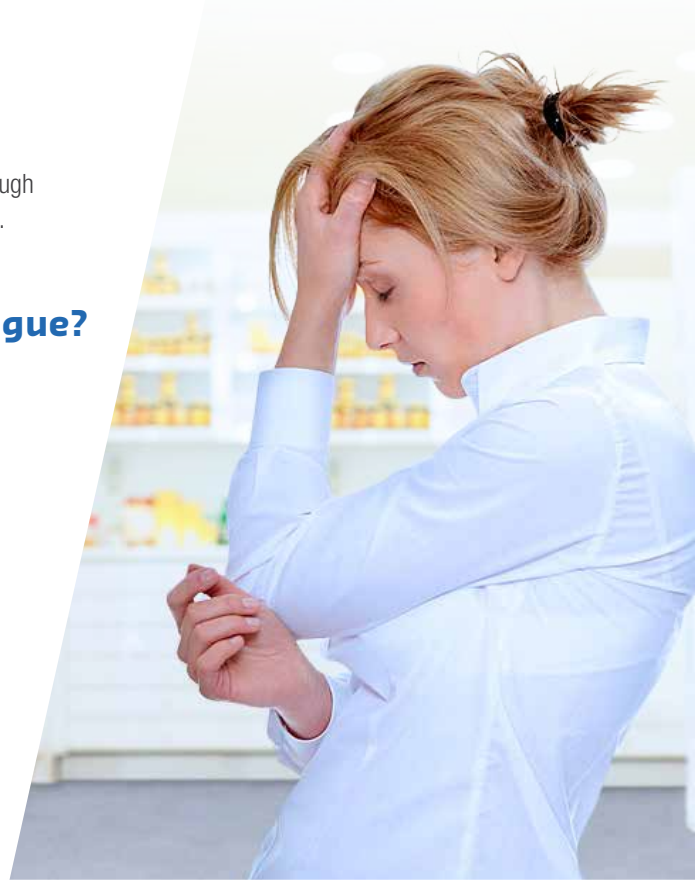

Are you familiar with the consequences of fatigue?

- Diminished worker **productivity**
- Increased **risk of accident**
- Reduced worker **motivation** and **morale**

ERGONOMICS AS THE SOLUTION...

Ergonomics is the science of designing the workplace to maximize productivity by reducing fatigue and discomfort.

There is a significant correlation between the floor surface of a workplace and the fatigue of workers.² This situation can be easily rectified with proper ergonomic mats.

THE LACK OF ERGONOMICS LEADS DIRECTLY TO MUSCULOSKELETAL DISORDERS (MSDs)

Musculoskeletal disorder is a condition that develops gradually as a result of repeated trauma.

MSD is the second most costly disease in Canada, more so than Cancer!³

YOUR EMPLOYEES ARE AT RISK OF MSD!

- Lower back pain is more frequent when **25%** of 8 hour work shifts are in a standing position.⁴
- **83%** of workers in the manufacturing sector have chronic feet/leg and lower back problems.⁵
- Most commonly reported problems are:⁶
 - Disc herniation (lower back)
 - Venous pooling (legs and feet)
 - Osteoarthritis (articulations)

THE COST OF MSD IN CANADA:

- Canada's claim costs: **20 billion dollars** per year.⁷
- Workplace claim due to MSD: **42%** of Ontario lost-time claim and cost claim.⁸
- From 2003 to 2007, **13,382,811 work days** were compensated due to MSD in Quebec.⁹

WHY ANTI-FATIGUE?

Softness: allows proper weight distribution while reducing the impact on the joints, allowing a more natural position and reducing stress on pressure points.

Support: provides resilience and bounce. As the worker's foot presses into the mat, the matting pushes back against the foot enabling the return of energy and preventing blood from stagnating.

- Relieve tightened muscles
- Increase blood flow from compressed blood vessels
- Reduce stress on spine and back resulting from static movements
- Relieve stress on knee, foot and ankle joint pressure points resulting from long standing

WHAT IS

Our Zedlan products offer incomparable advantages:

- **More energy!** Zedlan™ sponge has three times the bounce of traditional anti-fatigue products
- **More durable!** Zedlan™ sponge outwears similar products by nearly three to one
- **Less slips and falls!** Zedlan™ sponge offers superior traction compared to regular foam products
- **Extreme flexibility!** Zedlan™ sponge will keep its anti-fatigue property, even under freezing temperatures
- **Natural anti-static!** Unlike other sponge products, Zedlan™ offers natural resistivity of 10^9 ohms per square

TOTAL CONFIDENCE WARRANTY

*We truly believe in our product and stand behind it. You can therefore rest assured in giving us your **total confidence**.*

Your satisfaction is our priority!

AT MAT TECH, INNOVATION IS KEY.

We have the capacity and initiative to use our imagination to find more matting solutions.

Here are our latest innovations.

WD Elegance™: a unique Ergonomic mat that can be both comfortable and elegant.

WD FoodMaster™: the only ergonomic mat that has a specially formulated surface that resists spillage of fat, oil, alcohol and sugar. Specifically developed for a butcher and pastry cook.

STANDARD LIMITED ONE-YEAR WARRANTY POLICY

Mat Tech warrants new products against defects in material and workmanship when maintained as instructed in the Mat Tech Use and Care Product Information sheets included with each product. The obligation under this warranty is limited to the original user and to the replacement, repair, or pro-rated refund of said product. This warranty excludes the costs incurred for the installation of the carpet and/or mat. It remains the responsibility of the owner to carry out an inspection of the product prior to the installation.

THIS WARRANTY IS NOT APPLICABLE UNDER THE FOLLOWING CIRCUMSTANCES:

- Improper use, application, installation or cleaning of the product
- Normal wear
- Use of this product for other than its intended purpose
- Lack of proper maintenance as described in the Mat Tech Use and Care instructions packed with each product
- Products that have been altered in any way

If a problem with a product develops during the warranty period, contact your authorized Mat Tech dealer.

TOTAL CONFIDENCE WARRANTY

NO OTHER MATS WILL DO A BETTER JOB!

Our Performance, Prestige, Logo and Comfort + were developed to provide you with the best matting solutions in the marketplace, to reduce your maintenance costs and to ensure the health and safety of your employees and customers.

For the life of the product, we promise to replace the product if it does not do the job

Your satisfaction is our priority!

This warranty is applicable as long as the product is properly maintained and utilized. However, it does not cover normal wear. If you are not fully satisfied with a product during the warranty period, contact your authorized Mat Tech dealer.

ENTRANCE MATTING

Regular maintenance of your mats is critical to extend mat life and appearance. It is recommended to develop a regular maintenance schedule. Frequency will depend on traffic and soil conditions.

INITIAL MAT USE

- 1 | Within a few days of receipt, rolled mats should be unrolled and laid flat.
- 2 | Normal shedding or “fuzzing” may occur with new carpet top mats. This will disappear after a few vacuumings.
- 3 | Some rubber mats may have an oily or sticky film on them. This is a releasing agent that is inherent to molded mats, not a defect. Simply wash down with a mild detergent or degreaser to remove this film.
- 4 | To store mats, roll them up and lay them in a dry area with moderate temperatures. Do not stand on end or crush.

PERIODIC INSPECTION

Periodic inspections are recommended on a regular basis to check for border tears. To repair a damaged border or area, glue the section together with cyanoacrylate ester type (super glue) adhesive.

CARPET MATS AND HDNP PRODUCTS

Entrance mats are used to capture dirt and debris before it can be tracked into a facility. However, mats must be cleaned regularly to extend their usefulness and appearance.

- 1 | Vacuum daily
- 2 | Hand wash or extract stains with a carpet spotter using a water-based carpet detergent or shampoo.
- 3 | Periodically clean the mat with a carpet extractor using a water-based detergent or shampoo. Do not use solvent-based cleaners.
- 4 | Excess water is removed by extracting or hanging the mat. Let the mat dry completely before allowing foot traffic to resume.

IMPORTANT

Do not use rotary scrubbers or other mechanical cleaners or scrubbers to clean. Do not use solvents, pH detergents, or alkalis directly on the mat or use the mat in areas where these are used.

ERGONOMIC MATTING

Regular maintenance of your mats is critical to extend mat life and appearance. It is recommended to develop a regular maintenance schedule. Frequency will depend on traffic and soil conditions.

INITIAL MAT USE

- 1 | Within a few days of receipt, rolled mats should be unrolled and laid flat.
- 2 | Some rubber mats may have an oily or sticky film on them. This is a releasing agent that is inherent to molded mats, not a defect. Simply wash down with a mild detergent or degreaser to remove this film.
- 3 | To store mats, roll them up and lay them in a moderate temperature, dry area. Do not stand on end or crush.

ERGONOMIC / ANTI-FATIGUE MATS - Vinyl

- A. Shake dirt and debris or sweep with a broom daily to remove surface dirt. Sweep the area underneath the mat before replacing it to remove any dirt or debris that could cause premature wear or cause slip hazards.
- B. Mats can be washed off with a hose or pressure washer or damp mopped with a nonabrasive, water based detergent. Let the mat dry completely before allowing foot traffic to resume.

ERGONOMIC / ANTI-FATIGUE MATS - Rubber

- A. Shake out dirt and debris by daily flipping the mat over, or by gently sweeping with a broom to remove surface dirt. Sweep the area underneath the mat before replacing it to remove any dirt or debris that could cause premature wear.
- B. Mats can be washed off with a hose or pressure washer or gently scrubbed by hand with a soft brush and a nonabrasive, water based detergent. Let the mat dry completely before allowing foot traffic to resume. Grease proof or grease resistant mats used in kitchens or oily environments should be cleaned periodically using a water-based detergent and degreaser with a mop or pressure washer to break down excessive grease.

Mats should not be put in a dishwasher.

IMPORTANT !

Do not use rotary scrubbers, or other mechanical cleaners or scrubbers to clean. Do not use solvents, harsh detergents, or alkalis directly on the mat or use the mat in areas where these are used.

TECHNICAL GLOSSARY

Denier / Fibre

Denier is a unit of measure for the linear mass density of fibres. It is defined as the mass in grams per 9,000 meters. Fibre is a class of materials that are continuous filaments or are in discrete elongated pieces, similar to lengths of thread.

Grit-Safe

A hard sharp granule material that provides extra traction.

Heavy-Duty Needlepunch (HDNP)

Mechanical process involving thousands of needles that orient and interlock fibres to create non-woven fabric. Fabric is able or designed to withstand unusual strain.

Microfibre

Microfibre refers to synthetic fibres that measure less than one denier. The most common types of microfibrils are made from polyesters, polyamides (nylon), and/or a conjugation of polyester and polyamide. The shape, size and combinations of synthetic fibres are selected for specific characteristics, including: softness, durability, absorption, wicking abilities, water repellency, electrostatics, and filtering capabilities.

Nitrile

Added to rubber or plastic compositions, nitrile reduces the absorption of oils into standard rubber, which causes matting to swell and become slippery. For oily areas, use a mat blended with nitrile.

Non-conductive

Non-conductive matting protects workers from electrical shock when operating high-voltage equipment. All of our switchboard matting has nonconductive properties.

Nylon

A designation for a family of synthetic polymers known generically as polyamides. Nylon is one of the most commonly used polymers.

P.E.T. Fibres

P.E.T. (polyethylene terephthalate) fibres are produced from recycled plastic bottles, nicknamed "pop bottle carpet". Naturally stain resistant and do not require the chemical treatments used on most nylon carpets. Retains colour and resists fading due to sun or harsh cleaning. Colour shades can be richer and brighter than those found in nylon yarns.

Polyethylene

Created from a thermoplastic substance that is a synthetic polymer of propylene, this fibre is an excellent material for scraper matting due to its resiliency and hydrophobic properties (ability to repel water).

Polypropylene / Olefin

Yarn extruded from polypropylene pellets into very fine filaments that are entangled to make mat yarn. Colours are added to melted polypropylene before extrusion. The most common yarn used in entrance matting.

Post-Consumer

A waste type produced by the end consumer of a material stream; that is, where the waste-producing use did not involve the production of another product.

Post-Industrial Waste

Materials collected that were generated as scrap or waste material of a production run. These materials are also referred to as pre-consumer.

PVC

A thermoplastic material composed of polymers of vinyl chloride. PVC is a colourless solid with outstanding resistance to water, alcohols, and concentrated acids and alkalis.

Resilience

A key factor in defining anti-fatigue matting. A mat's resilience, or "bounce", is what aids in the removal of lactic acid from the muscles, reducing fatigue. The higher the number, the more resilient the matting. A resilience of 25+ provides a significant increase in worker comfort.

Resistivity

A measure of how strongly a material opposes the flow of electric current. A low resistivity indicates a material that readily allows the movement of electrical charge. The SI unit of electrical resistivity is the ohm meter.

Solution-Dyed

A method of dyeing synthetic fibre in which pigment is added to the nylon or polypropylene chip before it is extruded as filament yarn.

Tufted

Carpet manufactured by the insertion of tufts of yarn through a carpet backing fabric, creating a pile surface of cut and/or loop ends.

Wear-Bond

Our newest innovation in vinyl anti-fatigue matting. This proprietary process manufactures a durable, high-density top surface foam and a lower-density, softer base foam simultaneously. The result is a single, permanently bonded product with an excellent balance of wear and comfort.

Exclusive technology permanently bonds two surfaces without use of glues or adhesives

Safe to use in food preparation areas

The option to include your image on the mat

Manufacturing improvement resulting in more durable and heavy-duty product

Product contains recycled content and is designed to preserve our natural resources
